Publications of the Volcano Hazards Program 2014
Publications of the Volcano Hazards Program 2014

The Volcano Hazards Program of the U.S. Geological Survey (USGS) is part of the Natural Hazards activity, as funded by Congressional appropriation. Investigations are carried out by the USGS and with cooperators at the Alaska Division of Geological and Geophysical Surveys, University of Alaska Fairbanks Geophysical Institute, University of Hawai‘i Mānoa and Hilo, University of Utah, and University of Washington Geophysics Program. This report lists publications from all of these institutions.

Only published papers and maps are included here; abstracts presented at scientific meetings are omitted. Publication dates are based on year of issue, with no attempt to assign them to a fiscal year.
Volcano Hazards Program Publications 2014

Coombs, M.L., and Vazquez, J.A., 2014, Cogenetic late Pleistocene rhyolite and cumulate diorites from Augustine Volcano revealed by SIMS $^{238}$U/$^{230}$Th dating of
zircon, and implications for silicic magma generation by extraction from mush:
    Geochemistry, Geophysics, Geosystems, v. 15, p. 4846–4865.
Dawson, Phillip, and Chouet, Bernard, 2014, Characterization of very-long-period
    seismicity accompanying summit activity at Kilauea Volcano, Hawai‘i: 2007–2013:
Delpit, Séverine, Ross, Pierre-Simon, and Hearn, B.C., Jr., 2014, Deep-bedded ultramafic
    diatremes in the Missouri River Breaks volcanic field, Montana, USA—1 km of syn-
    Results from a study of noneruptive tremor recorded at Mount St. Helens, Washington:
